DIGITAL-LITERACY-PROJECT REPORT

NAME : POLICHARLA PURANDHAR

REG NO : 25MIP10020

BRANCH : INTEGRATED MTECH COMPUTATIONAL DATA SCIENCE

YEAR : 1ST YEAR

COURSE CODE : CSE0001

DATE : 31/03/2026

Introduction:

This project focuses on establishing a robust foundation in digital literacy, which is essential for navigating today's academic and professional landscapes. The scenario involves building a professional online presence, mastering collaborative digital tools, and understanding the nuances of cybersecurity. Throughout this project, I have developed various artifacts ranging from informative infographics to professional portfolios to demonstrate my ability to use digital platforms effectively. The objective was to transition from a basic user to a digitally fluent student, capable of communicating professionally and protecting myself against common online threats. This report details the tasks performed, the tools utilized, and the key insights gained during this process.

Task 1 : Digital Literacy Infographic

For this task, I created a comprehensive digital literacy infographic using Canva. I chose this tool because of its intuitive interface and high-quality visual assets. The infographic defines digital literacy and explains its importance for students, highlighting key areas such as safe internet practices, professional online presence, and email etiquette. It specifically guides students on using tools like Google Docs, Gmail, and GitHub for their academic work.

Reflection:

Creating this visual was a rewarding challenge. My primary difficulty was condensing vast amounts of information into a single page without making it look cluttered. This forced me to prioritize "short points and simple design" to ensure readability. Ultimately, this task improved my ability to simplify complex concepts and enhanced my graphic design skills.

Task 2 : Professional Portfolio Setup

For my digital portfolio, I established and updated profiles on three major platforms: GitHub, LinkedIn, and Kaggle. The purpose of this multi-platform approach is to showcase different facets of my professional identity. GitHub serves as my "digital notebook" for version control and hosting code; LinkedIn acts as my "professional face" for networking and education history; and Kaggle serves as my "practice ground" for data science and machine learning.

Future Plans:

Over the next four years, I plan to build a strong digital footprint. In the first two years, I will focus on uploading college lab work and personal projects to GitHub. By the third year, I intend to share certifications and project milestones on LinkedIn to attract recruiters. Finally, in my fourth year, I will use Kaggle to refine my portfolio with advanced projects to ensure high-quality job placement.

Task 3 : Digital Collaboration & Coding

In this task, I utilized Google Workspace and GitHub to practice collaborative workflows. I focused on using Google Workspace for real-time document collaboration and GitHub for managing code repositories. I practiced creating and editing Markdown files, which are essential for documentation in the tech industry. This task involved setting up structured folders for various modules like cybercrime case studies and social media checklists.

What I Practiced:

I practiced the "Fork and Pull" model and learned how to commit updates to files directly within a repository. This hands-on experience with version control is crucial for any Data Science (CDS) student. It allowed me to see how technical documentation and project management come together in a professional development environment.

Task 4 : Professional Communication

This task involved simulating professional communication by drafting emails for two distinct academic and professional scenarios. The first was a formal request for an assignment extension directed toward a professor, and the second was an inquiry to a recruiter regarding a summer internship opportunity.

Key Learnings:

I learned that professional communication requires clarity, a respectful tone, and proper formatting. Key elements include using clear subject lines, formal salutations, and professional signatures. This exercise highlighted the importance of being concise while maintaining a polite and professional demeanor to ensure effective correspondence.

Task 5 : Cyber Safety & Security

In the final task, I developed a cybersecurity mindset by creating a "Social Media Checklist" and a "Cybercrime Case Study" focusing on UPI payment fraud. This task was designed to identify common digital threats and implement preventative measures.

Key Learnings:

Through the cybercrime study, I gained a deep understanding of the "Refund Scam" and the critical importance of never sharing a UPI PIN to receive money. My key takeaway is that digital safety is a proactive habit—requiring strong passwords, two-factor authentication (2FA), and a healthy skepticism of "risky" links or unsolicited requests. Keeping a "Cybersecurity First" mindset is essential for protecting personal and financial data.
